## GENERAL DESCRIPTION

This data sheet will show how to remove Phantom Power consumption. It may not be necessary to use Magic Switch (Fig1) and an equivalent circuit (Fig2) has been provided in the data sheet. The Phantom Power consumption due to EMI Cap.'s discharge resistor can be removed by a pretty simple circuit as describe in the block diagram. However, Magic Switch could be most cost-effective, layout easy.....choice for designing zero no load consumption application.

Magic Switch, it behaves like a magic switch or a low-pass filter. Magic switch allows DC passes and AC is blocked. Magic switch is a low pass filter. It allows frequency more than 20 Hz to pass (AC plug-in Magic switch turn off) with ~ Zero Input Power. When frequency small than 20 Hz , Magic switch is turn on discharge EMI's Cap.

Magic switch power consumption is approaching to 0 mW when line voltage appears.

Note : When 264VAC input: Magic Switch consumption is approaching (264VAC) ${ }^{2}$ /12Mohm (internal resistor) -5.8 mW

## PIN CONFIGURATION

## FEATURES

- Remove Phantom Power consumption
- 4 terminal with $>5 \mathrm{~mm}$ space on package and PCB
- 2 terminal with $>3 \mathrm{~mm}$ space on package and PCB
- Meet safety ICE 60065/60950
- Break down voltage $\sim 1 \mathrm{KV}$
- Design for lightning surge sensitive environment
- One product works with any EMI's capacitor filter design
- Most cost effective, Layout easy solution, easily to meet Erp lot6 tier 2 requirement
- SOP8 / SOD123 packages for Adaptor / Desktop Application
- The package is polarity insensitive.

## Magic Switch ORDERING INFORMATION

| Part Number | Temperature Range | Package |
| :---: | :---: | :---: |
| CM02XISTR* | $-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ | SOP-8 |
| CM02XIUTR* | $-55^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ | SOD123 |
| CMD02XISTR* | $-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ | SOP-8 |
| CMD02XIUTR* | $-55^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ | SOD123 |

*Note: X : Suffix for Halogen Free and PB Free Product
TR : Package is Type \& Reel

## ABSOLUTE MAXIMUM RATINGS (TA= $25^{\circ} \mathrm{C}$, unless otherwise specified)

| PARAMETER |  | Symbol | RATINGS | Unit |

Note for 1 KV Mosfet On delay time: Ton delay is inversely proportional to Vd 1 d 2 , Ton delay is around $25 \sim 40 \mathrm{~ms}$ in $\mathrm{Vd} 1 \mathrm{~d} 2=380 \mathrm{~V}$

DELAY TIMER (Figure1 : cursor a to cursor b)

## IC Test Equipment circuit

## DESCRIPTION

Magic switch is designed to replace the discharging resistor of EMI filter. Magic switch is one product to fit for any EMI's capacitor Design. Magic switch is a low-pass filter. When the input frequency is lower than 20 Hz (AC plug out), the two-integrated 1KV MOSFETS will be turned on and when the input frequency is higher than $\sim 20 \mathrm{~Hz}$ (AC plug in), the two-integrated 1 KV MOSFET will be off.

Magic switch has 4 or 2 terminals. Magic switch's two 1KV MOSFET connects 2 external discharging resistor when input frequency $<20 \mathrm{~Hz}$. Magic switch's two 1KV MOSFET disconnects 2 external discharging resistor when input frequency is $>20 \mathrm{~Hz}$.

The total value of two external resistor value should be determined by the ( $\mathrm{Rd} 1+\mathrm{Rd} 2$ )* Cx time constant, If Tdischarge time need small than 0.5 Sec . Therefore, Tdischarge $=(\mathrm{Rd} 1+\mathrm{Rd} 2) \times \mathrm{Cx}<0.5 \mathrm{Sec}$. Cx is the EMI x capacitor. In actual application, using Magic Switch just need select external discharge resistor Rd1 and Rd2 from table1.Finally, X -capactior discharge to $37 \%$ voltage is (Tdischarge time+Ton delay time)

For example:
The EMI Capacitor Tdischarge time equation->V2=V1* $e^{(-T / R C)} ; \mathrm{V} 2$ is discharge voltage; V 1 is initial voltage, If your Tdischarge time select=0.6sec From Table 1 you can obtain Cx and (Rd1+Rd2).
The X -capacitor discharge to $37 \%$ voltage=(Tdischarge timr + Ton delay time) $=0.9 \mathrm{sec}$

| Product | Magic Switch (for any EMI capacitor) |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Calculate Discharge Resistor | Comparison Sheet |  |  |  |  |  |  |  |
| Total X Capacitor (uF) : $\mathrm{C}_{\chi}$ | 0.47 | 0.68 | 1 | 1.5 | 2 | 2.2 | 3 | 4.7 |

Table 1. Discharge resistor select

## DISCHARGE TIMING TEST

Condition: 264VAC , $\mathrm{Cx}=0.62 \mathrm{uF} ;$ Tdischarge time $<0.6$ sec--------look up table1- $\rightarrow$ Rd1+Rd2 $\sim \sim 906 \mathrm{~K}$

A Csurge $\sim 47 \mathrm{pF}$ capacitor should be added to parallel with Magic switch for strenuous lightning surge test. The Csurge is added to suppress the voltage across Magic Switch.

Magic switch $4 / 2$ terminal package provides minimum $50 / 3 \mathrm{~mm}$ space for PCB layout. Magic Switch is designed for lightning surge sensitive environment.

Without Magic Switch, the equivalent circuit on the simplified block figure has been provided and it will have the similar good performance. However, Magic Switch is more cost-effective and easy layout.
The maximum Rd1+Rd2=0 ohm and the minimum $\mathrm{Cx}=2 \mathrm{UF}$ (1sec discharge $37 \%$ or 42 V )
The maximum $R d 1+R d 2=1.1 \mathrm{M}$ ohm and the minimum $\mathrm{Cx}=0.1 \mathrm{UF}$
